RIVERS SITUATION AND QUALITATIVE FLOOD FORECAST

I. METEOROLOGICAL FEATURES

- Continental air is prevailing over most parts of the country, however, shallow trough of westerly wave lies over northern parts of the country.
- A fresh westerly wave lies over north Iran.
- A low pressure system has developed over north Bay of Bengal and adjoining Odisha (India) and is expected to move in westwards direction during coming days.
- Seasonal low-pressure area lies over northwest Balochistan.
- Weak moist currents from Arabian sea are penetrating into the upper parts of the country up to 2,500 feet.

II. METEOROLOGICAL OUTLOOK

- Mainly dry weather** is expected over most parts of the country, however, **Isolated rain-wind/thunderstorm** is expected over the **upper catchments of Indus river, upper Khyber Pakhtunkhwa** and **Gilgit-Baltistan** during next 24 Hours.

III. HYDROLOGICAL SITUATION at 0600 PST

- All major rivers are flowing in their normal flows at gauging stations.

5. HOW CLOSE IS EACH RIVER TO ITS LIMIT?

Sidhnai is in below low to low flood at 25.7 — 4.3 below its low flood level (30.0). Each bar is one station's own flood levels across its maximum capacity; the solid run is the flow so far, the pale run is the room still left.

All figures in thousands of cusecs. Full bar = maximum (design) capacity. Solid colour is the flow reached so far and the pale wash beside it is the room still left; the dark line between them is the current reading, printed beneath it. Thin white lines are that station's flood levels with their thresholds beneath, so the same colour can begin at a different point on every bar. Each band is named inside itself — initialled (BL, L, M, H, VH, EH) where the band is too narrow for the words, and left blank where it is too narrow for those. Stations without a design capacity are not shown.
